

The Effects of Pheromones

Directions:

1. Select a wild or domestic animal to research. After selecting the animal, notify your instructor so no two students select the same animal.
2. Using the Internet, library or any other available resources, research how pheromones specifically affect the animal's behavior.
3. Research must include how the pheromones affect the animal as well as an example or scenario of each:
 - Aggregation pheromones
 - Alarm pheromones
 - Epideictic pheromones
 - Territorial pheromones
 - Trail pheromones
 - Sex pheromones
4. After completing your research, create a Microsoft® PowerPoint® Presentation with at least 15 slides including a list of sources used.
5. Share your presentation with the class.
