

Four-Stroke Operation

Directions:

1. Your instructor will divide the class into four groups and assign each group one of the four strokes (intake, compression, power, exhaust).
2. As a group, create a poster outlining the process of the assigned stroke. Posters should also include a large diagram, with all important components labeled.
3. Cite all sources used.
4. Present your diagram to the class.
5. Once all presentations have taken place, come together as a class to discuss how all four strokes work together for operation.
