

Rise of Technology

Directions:

For this *Project*, trace the progress of industry growth by investigating a chosen piece of technology used in manufacturing.

1. Start by using any available resources to research and better understand a technology used within the manufacturing industry.
2. Trace the evolution of the technology and analyze events which influenced the development.
3. Research how the technology altered the means of engineering, production, consumption and distribution of goods once it was adopted. Also include the international effects of the technology.
4. Analyze the positive and negative aspects of the chosen technology.
5. Develop a visual presentation on the technology and discuss factors which affected the implementation of this technology.
6. Attach a citation sheet listing all sources used.
7. Share your findings with the class and be prepared to answer questions.
